KERALA

KERALA is a wood shelf support boasting a captivating design, especially conceived for kitchen furniture.

KERALA is made of two elements in technoplastic: an actual support to be slotted into the panel and a special dowel to be inserted into the side.

The installation is carried out very easily because the dowel locks into the support simply by pressing the shelf downwards. The particular shape of the components guarantees the locking of the shelf and, therefore, the transportation of the cabinet with the shelves already assembled.

Also the disinstallation does not require the use of any tool, as it is simply carried out by sliding the clip backwards.

The minimum shelf thickness to install KERALA is 16 mm.
