Hanex[®]
Solid Surfaces

The Innovation of

Extremely durable

Antimicrobial

Easy to work with

Environmentally friendly

Unlimited design possibilities

Wide design portfolio:

Hanex® panels are available in thicknesses of 6 mm, 12 mm and 19 mm and in various dimensions and colours.

We have a long track record in the production of acrylic-bonded solid surfaces (since 1995) at various production sites and facilities.

Our passion and focus is always to identify the next trends and new technologies and translate them into new designs, patterns and end products.

In addition to a European warehouse in Hamburg, we have an extensive network of qualified processors and distributors all over the world.

The unlimited design exibility of Hanex® allows you to create beautiful, durable and aesthetically pleasing surfaces in any residential or commercial environment.

It is durable, can be thermoformed into any desired shape and,

thanks to its wide colour spectrum and translucency, allows for extraordinary, colourful designs.

Hanex® can be heated and three-dimensionally shaped in a simple process (limited colours), enables visually seamless designs, offers an almost infinite colour spectrum and - for some shades - a special translucency in combination with light.

Applications include all vertical and horizontal surfaces in kitchens, bathrooms, airports, hospitals, food preparation facilities, retail shops, schools, universities, stadiums, offices, exhibition stands and public buildings.

Hanex® is available in sheet form in various sizes and thicknesses. The collection is complemented by our range of kitchen sinks, washbasins, baths and shower trays.

Hyundai L&C

has established itself beyond the boundaries of building expertise as a "Total Living Interior Company".

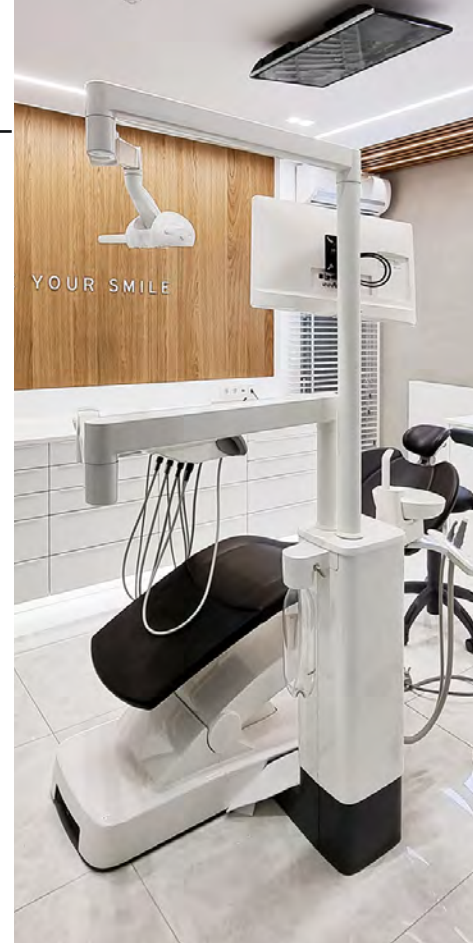

We have focused our research and development capabilities on developing environmentally friendly, energy-saving and innovative building materials. We are also responding to new needs in the fast-changing world and improving our customers' quality of life by diversifying our business structure and consumer solutions.

We currently focus on five business areas: Windows, Interior Stone, Decorative Material, Total Interior and Furniture.

In Europe we are currently distributing the high quality product portfolio of the divisions Interior Stone and Decorative Material divisions.

In 2021, our annual sales amounted to 1.103 billion EUR and HYUNDAI L&C's goal is continuous growth.

Our in-depth expertise in the development of innovations, the continuous optimisation of processes and operations, as well as broad distribution channels maximise synergies and support our goal of being our goal to become the best company for the entire residential sector in Korea.

Easy processing High hygiene standards

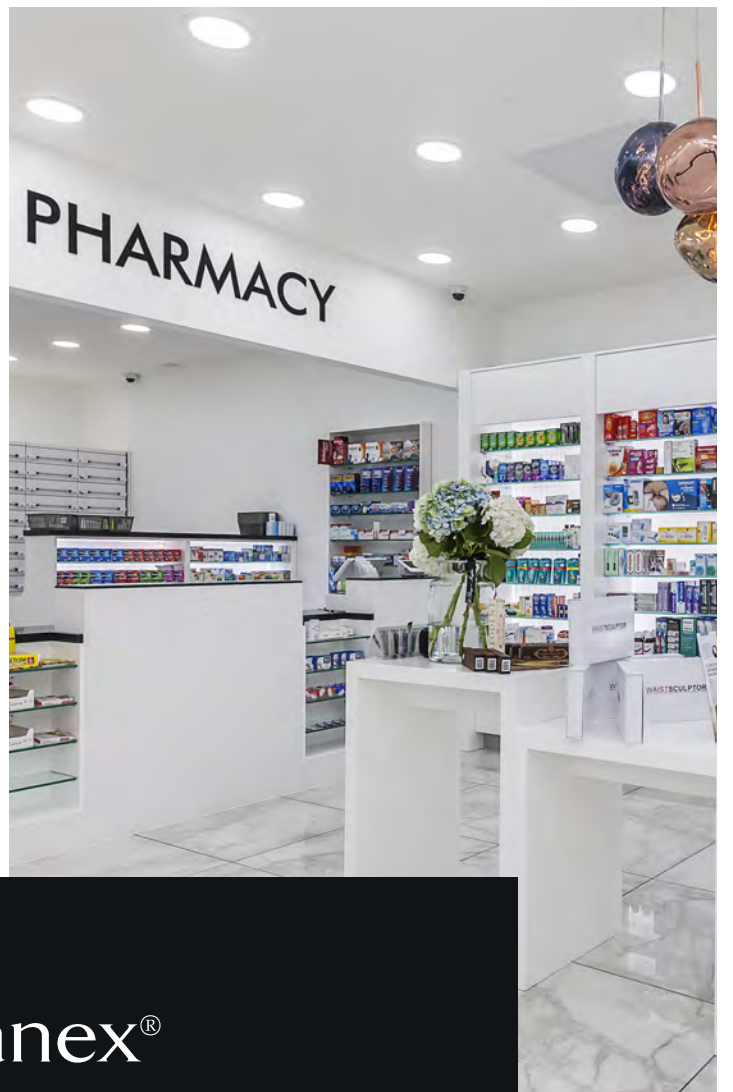

Although Hanex® is almost as robust as stone, the material can be worked similar to wood: It can be sawn, milled, drilled and sanded.

As a specialist woodworking company, for example, you have the necessary equipment in your workshop to work with Hanex®. This includes commercially available joinery machines such as sliding table saws, routers and sanding machines.

Hanex® Solid Surfaces

*Our vision is to innovate
your world
The only limitation of Hanex® is
your imagination*

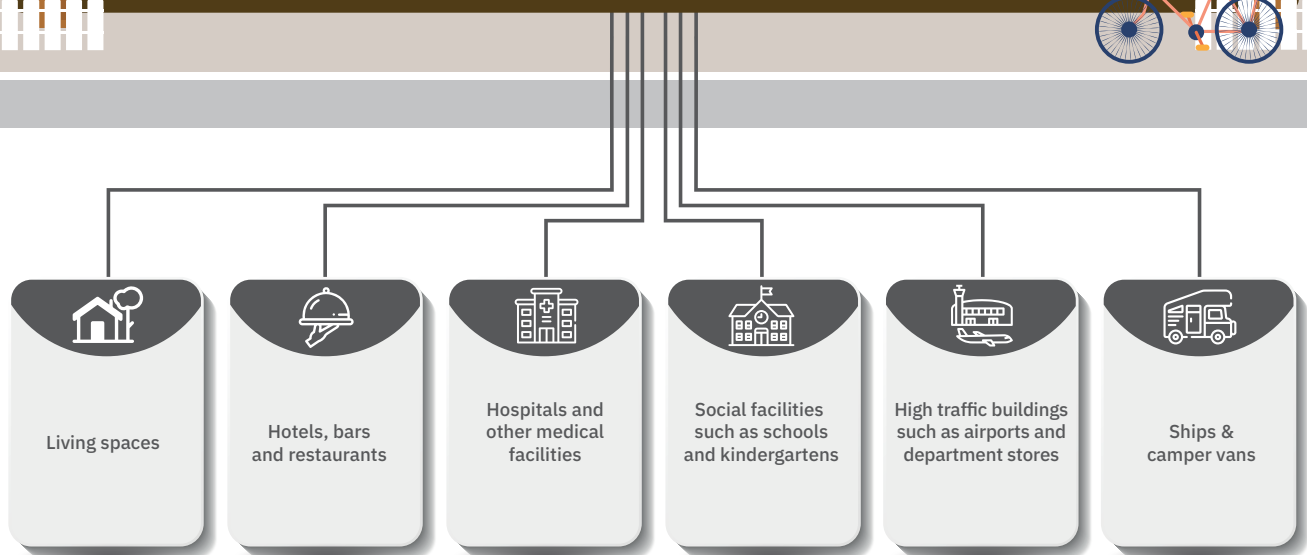

Selected Works of Hanex®

The diversity of Hanex® applications

*The beauty and everlastingness of Mother Nature is reflected in our decors
and the wide range of possible applications.
In the urban environment, our end products can be used in almost all areas.*

*As worktops, as wall cladding, as façade cladding, as worktops, basins and sinks,
in various furniture designs and in many other end products.*
